Digital Citizenship, Security & Privacy

Colorado Academy works hard to make sure our students are properly educated on the appropriate use of the Internet, security, and privacy.

A comprehensive digital citizenship program starts in the Pre-Kindergarten and continues through high school. Topics include:

• Search Skills
• Online Safety & Privacy
• Web Site Evaluation
• Cyberbullying
• Digital Reputation
• Responsible Social Media Use

The Colorado Academy network provides content filtering customized to each division to help prevent access to inappropriate material and resources. In addition, our network infrastructure will block access to known malware, spyware, and viruses.

Colorado Academy works with a number of third party vendors (including Apple, Google, and Microsoft) to provide services to faculty and students. All vendors that Colorado Academy works with must meet the following standards:

• Not sell or share student information
• Not behaviorally target advertising
• Use data for authorized education purposes only

All of our school wide vendors have also signed the Student Privacy Pledge (http://studentprivacypledge.org/).
